## Scope of Work

Supply and Fabricate 80M long FRP adhesive bonded pedestrian footbridge in 11 No. units as part of a new footpath. The bridge is supported on wooden trestles alongside the existing railway crossing and now provides a safe means to cross the river at this location. The footbridge was assembled and load tested at Pipex fabrication facility in Plymouth over an 18 week period. The largest unit was 12M long and weighed 2800kg facilitating installation by roadtrailer from the railway track alongside.
